

# Gateway Medical Center Renovations Clarksville, Tennessee

*People, Building Excellence  
for People*

Type of Facility: Healthcare

#### Project Description:

- This project consisted of the renovation and installation of 12 steam pressure reducing stations in mechanical rooms from 1953 and 1978 construction as well as seven steam condensate pumps in mechanical rooms and steam and condensate piping.
- A portion of the domestic hot and cold water piping and five domestic water heaters in mechanical rooms in 1953, 1978, and 1989 construction and five associated re-circulation pumps were installed.
- Hot water reheat piping and seven hot water reheat pumps in the mechanical rooms were installed.
- We replaced four steam to hot water heat exchangers in the mechanical rooms.
- Chilled water piping and a portion of the underground sanitary piping in the 1953 basement were replaced.
- Lee Company furnished and installed a 3000 gallon above ground fuel oil tank to serve the existing 300 KW emergency power generators as well as the piping required to connect the new tank to the existing underground piping system.
